

Cooling Optimized for the Most Critical Environments

In today's technology-rich business world, more and more buildings require precise, stable, temperature and humidity control. From large-scale data centers and technology rooms, to server rooms, clean rooms, and hospitals, **EMCOR Services New York/New Jersey, Inc.** has extensive expertise providing HVAC systems for the most critical environments.

Cutting-Edge Cooling Technology

Whether it's a raised floor solution, calibrated vectored cooling, or more traditional computer room air handlers, we're experienced with a wide array of state-of-the-art technology. And, because we are manufacturer-independent, our technicians are trained and qualified to install and support systems of all types regardless of make and model.

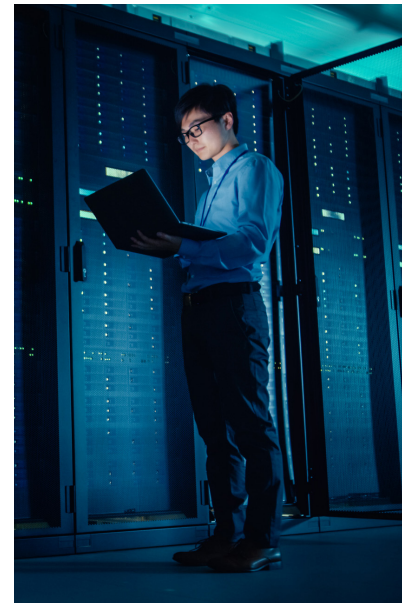

Critical Care for Critical Environments

After installation, we offer comprehensive maintenance programs to help keep cooling systems operating reliably for the long haul. Our large commercial

HVAC service staff and fleet of well-equipped service vehicles means that we are ready to rapidly respond to emergencies—24/7/365.

Industry-Leading Training for Industry-Leading Technicians

We employ a team of specially trained computer room air conditioning technicians who carry a number of top manufacturer certifications. They receive ongoing education and regular hands-on instruction with the latest in HVAC equipment and controls systems to help ensure we stay abreast of any new innovations in the industry.

Hundreds of Projects. Five Major Markets Served.
